

PROFLEX® GLOVES FEATURING OUTDRY®

INSERT? WE DON'T NEED NO STINKIN' INSERT.

WHAT IS OUTDRY®?

OutDry® is the most advanced waterproof // windproof technology available. OutDry's patented lamination process produces a bonded waterproof // windproof membrane that is revolutionizing your glove's fit, feel and function.

WHY OUTDRY®?

Revolutionary Waterproof // Windproof

OutDry® technology's patented lamination process directly bonds a waterproof, windproof, breathable membrane to the inside of the glove's outer shell. No insert layer stitched into the glove. This creates one unique waterproof entity with sealed seams for zero water entry and, unlike a traditional insert, no gaps between the shell and the waterproof, windproof barrier for water, wind and cold air to collect. With OutDry®, the elements are stopped at the first layer.

Unrivaled Warmth

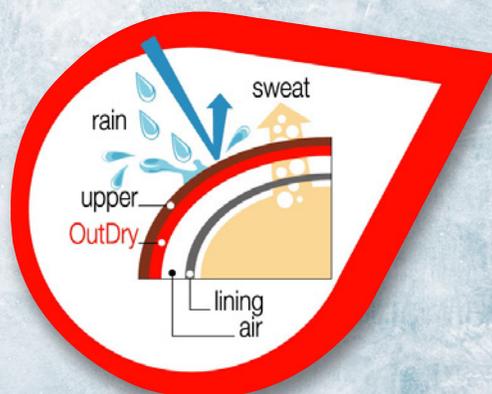

No water. No wind. And with OutDry®, your hand is always surrounded by warm, dry air. High water vapor permeability allows the glove to breathe, greatly reducing humidity and improving moisture management. A dry environment and a constant, stable temperature inside the glove allows the Thinsulate™ insulation to perform at its highest level, keeping your hands warmer, longer.

**WATER
NOT
INCLUDED™**

Superior Fit, Dexterity and Durability

The OutDry® lamination process uniformly seals the glove shell with an ultra-thin 0.03mm membrane. Without the extra bulk of a traditional insert, gloves with OutDry® are thinner while still being warmer, drier and providing superior dexterity. With no insert sewn in and minimal moisture on your hands, the days of pulling out your liner and ruining your gloves are over!
